

Hand-sweep infrared sensor switch

Model : TS-L201

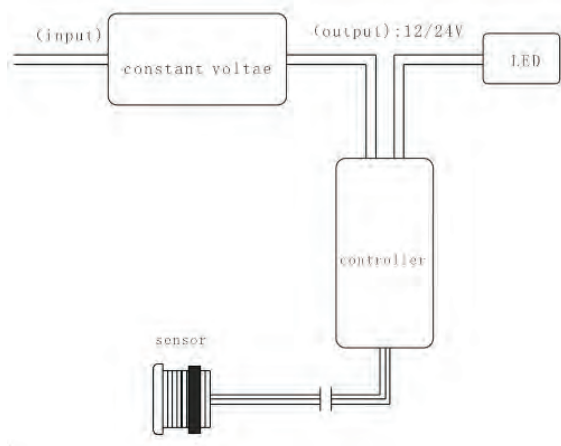

Features:

The induction probe and the controller are separated.
The induction probe can be installed flexibly on the side, bottom and front of the cabinet

Sensing probe made of aluminum alloy energy work infrared sensing probe, probe using special infrared filter, effectively block the interference of natural light to the sensing probe, able to work under the sunshine or light, the processor chip imports from the United States, strong resistance to electromagnetic interference, brushing detection program is after many years of practical test, high reliability, the product has passed the European CE certification

Model:TS-L201

Standard

Standard Size(mm)	40*20.5*11mm
Operating Voltage	DC12~24V
Operating Temperature	-20°-55°C
Operating Current	Max 2.5A
Power (W)	12V Max 30W 24V Max 60W
Induction Distance	8cm
Color	copper
Life Time	50,000(H)
